Safety & Environment

DR Hydrovac is committed to a strong health and safety program that protects our employees and property, the environment, and the public from accident or injury. At every level our personnel are responsible and accountable for our overall safety initiatives. Complete and active participation by everyone, every day, in every job is necessary for the safety excellence we expect. DR Hydrovac maintains a industry leading safety program, and are proud of our "no lost time" and recordable incident safety record. Our comprehensive health, safety and environment program has been audited by the Alberta Construction Safety Association and has been awarded a Small Employers Certificate of Recognition for meeting or exceeding established health and safety standards.

All DR Hydrovac staff are trained and certified with H2S Alive, Ground Disturbance Level II, Fall Arrest, WHMIS, CSTS and First Aid/CPR, as well as Equipotential Bonding Training. Additionally, we are registered with ISNetworld and Complyworks and hold an A + rating with both organizations.

Our Equipment

Our tri-drive hydrovac trucks have a capacity of 9 m3 of water and 10 m3 of debris, allowing us to excavate twice as long as other units. These trucks have a 30' boom reach that can go 23' vertically before needing a remote hose. Debris is pushed out of the holding tank, making washing of the tank unnecessary. With disposal taking mere minutes we are able to return to work quickly.

All trucks are equipped with an 8" suction hose, 5,400 CFM blowers, CAT tri-plex water pumps, and 740,000 BTU boilers. These hydrovacs are powerful, rugged and, most importantly, SIMPLE. Our operators rely on user-friendly equipment to perform in the field with minimal down time.

Our Services

- Excavation of all types of soil and materials
- Exposing pipelines and utilities
- Slot trenching
- High pressure wash
- Piling and post holes
- Cleanout and debris removal
- Plant work
- Steaming and thawing

About Us

DR Hydrovac provides non-destructive daylighting of pipelines and other underground infrastructure. This is achieved by the use of a combination of high pressure water and a powerful vacuum to remove soil cover.

We are known for our efficient, safe and on-time services. Our operators are professional, knowledgeable and eager to help you get your job done with the highest level of quality.

Our Mission

DR Hydrovac's mission is to promote safety and productivity, while establishing, developing and maintaining successful customer relationships.
